Self-Configuring Digital Processor for On-Line Pulse Analysis

Abbiati, R. [Geraci, A.](#) [Ripamonti, G.](#)*This paper appears in: Nuclear Science, IEEE Transactions on*

Publication Date: June 2004

On page(s): 826 - 830

Volume: 51 , Issue: 3

ISSN: 0018-9499

Abstract:

An adaptive self-calibrating instrument for digital spectroscopy is proposed and demonstrated. Most of the typical processing features (pole-zero cancellation, restoration, and shaping) are digitally implemented and optimized. The main feature of the processor is the capability to self-calibrate and self-optimize the **configuration** sections of the whole measurement setup, both digital and analog parts. This is accomplished through automatic dynamic initialization procedures, which make the system particularly user friendly and flexible to varying operative conditions while keeping very high resolution performances.
